

Hello and congratulations on downloading Fusion 360!

Fusion 360 combines fast and easy 3D modeling with manufacturing workflows (CAD/CAM/CAE), to help you bring your ideas to life.

Whether this is your first introduction to 3D modeling, or you're a seasoned expert, starting with an existing model – also known as a data set – is a quick and fun way to get started with Fusion 360. The data sets we've provided have been created by students, who like you, want to make better things.
