

TOP THREE WAYS TO BOOST YOUR BIM BOTTOM LINE

HOW CAN YOU MAKE YOUR BIM INVESTMENT PAY EVEN GREATER DIVIDENDS?

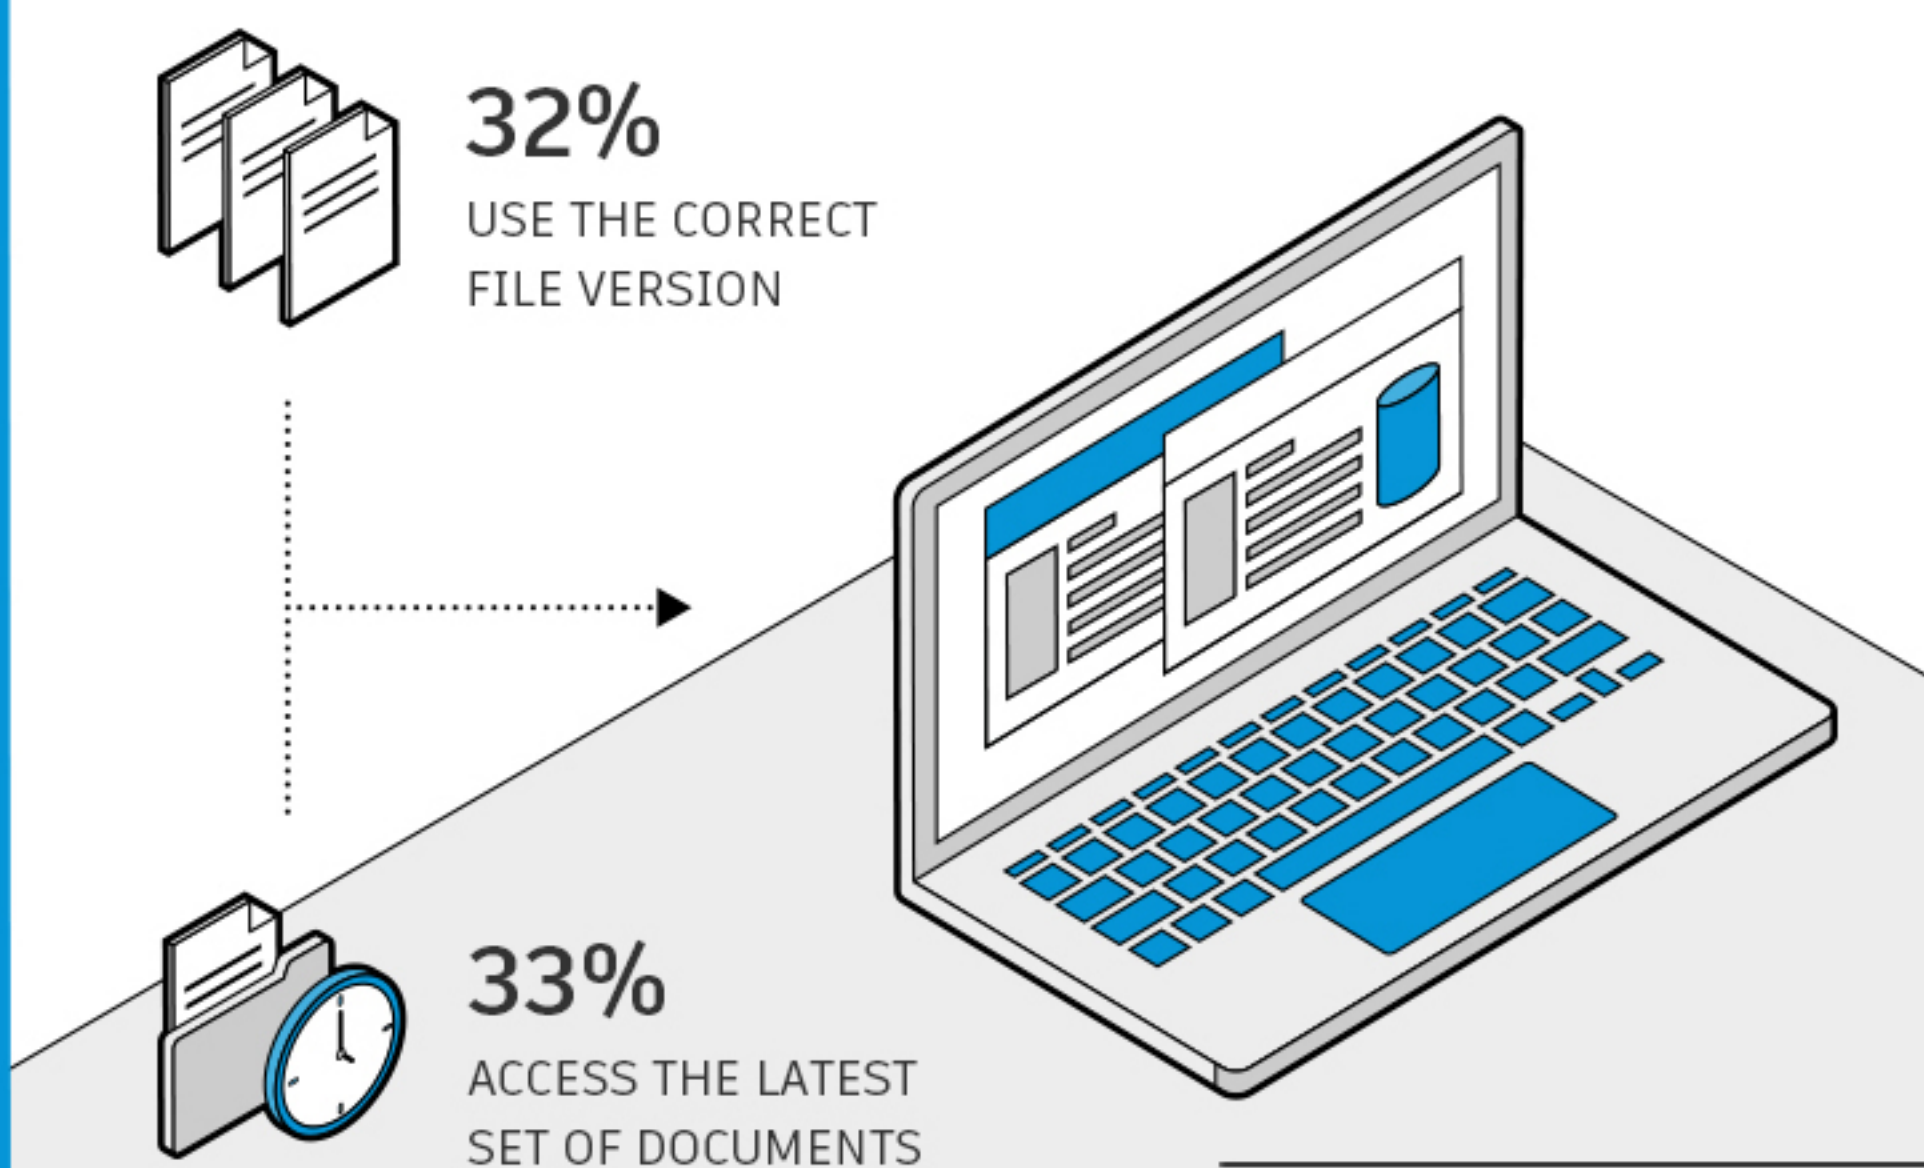

THE ANSWER MAY BE **IN THE CLOUD.**

Meet the **three challenges** BIM project teams face head-on with the power of cloud collaboration.

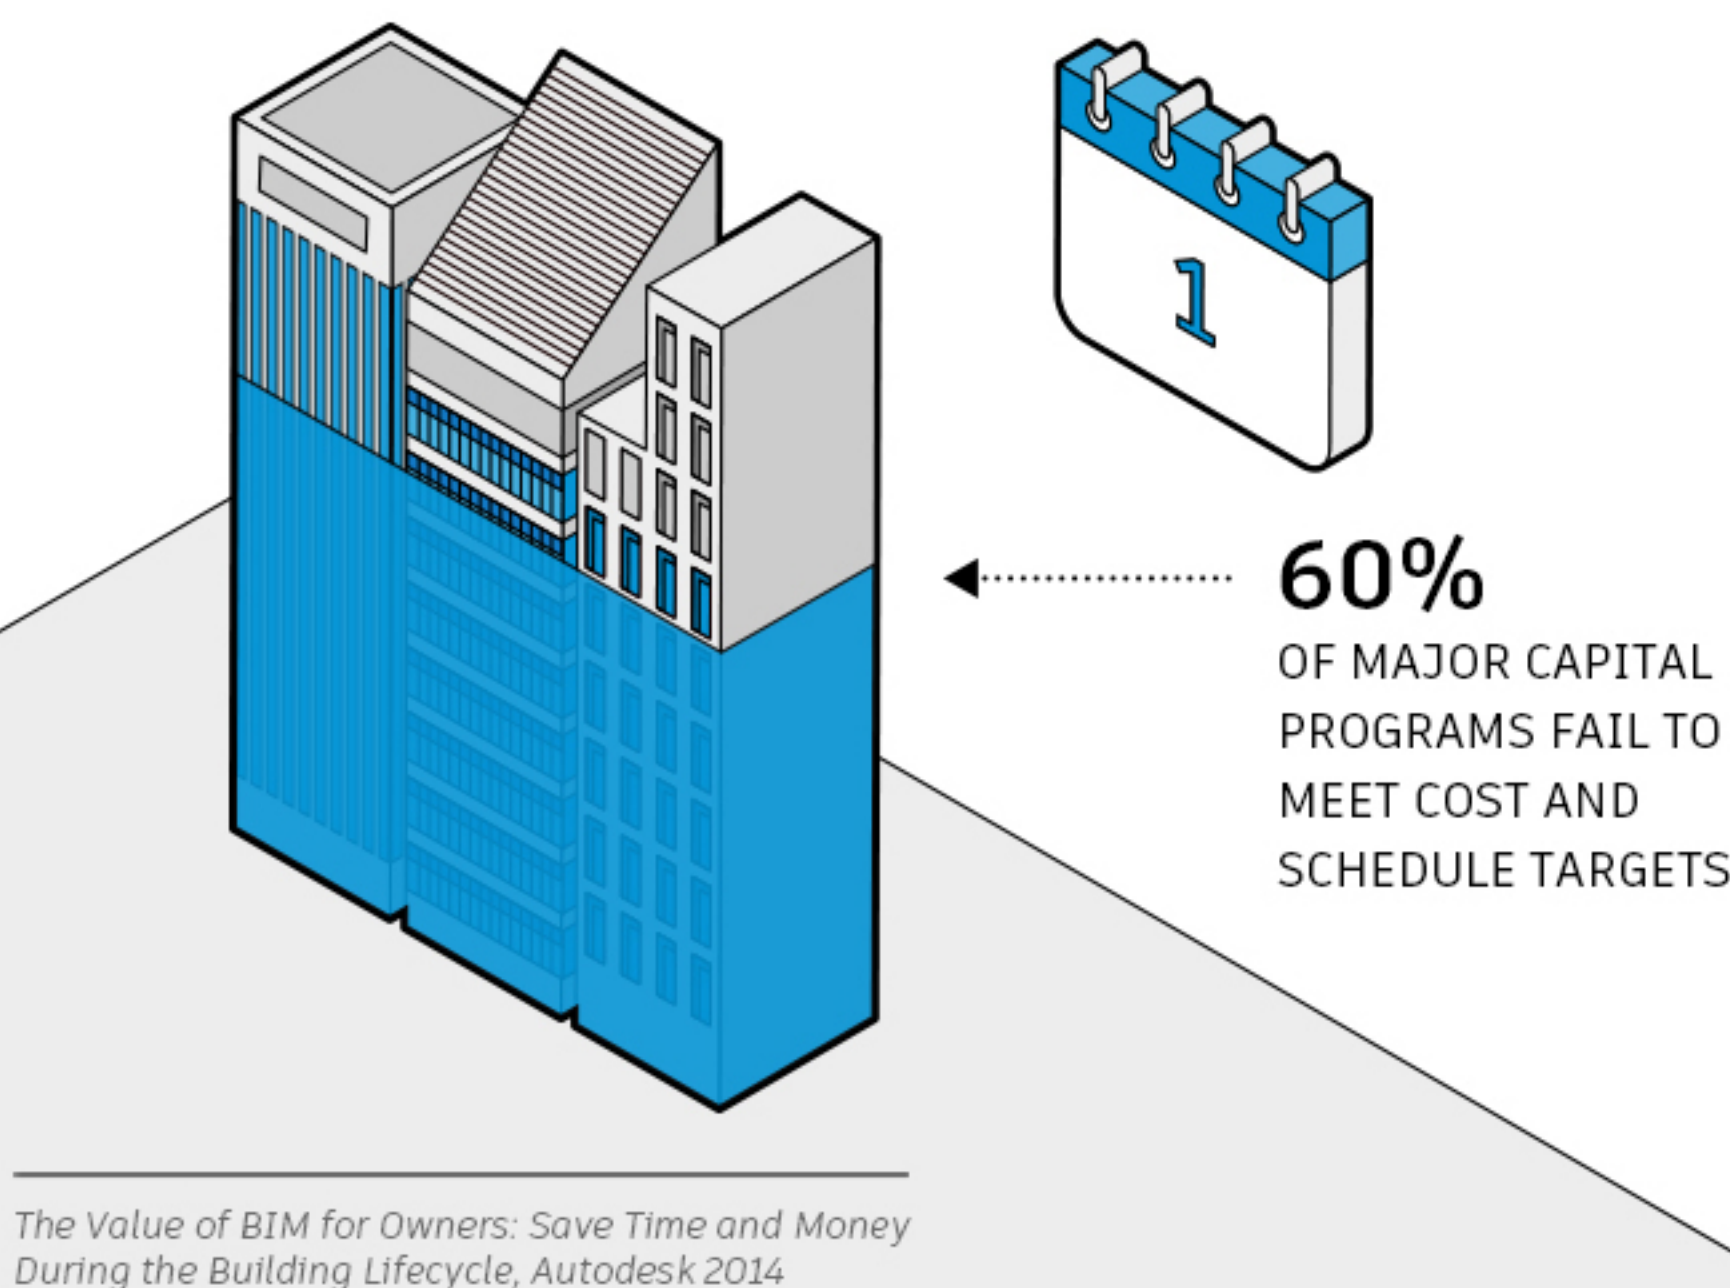

BENEFIT: Collaborate and track projects better

Project delays. Cost overruns. A nightmare scenario that's often caused by simple human error or gaps in communication. But there's a better way: work in the same BIM model as your team, and you're always on the latest version. Easily visualize changes between various package versions so that everyone is on the same page.

CHALLENGE 1: Multiple file versions cause mistakes

CHALLENGE 2: Projects take too long

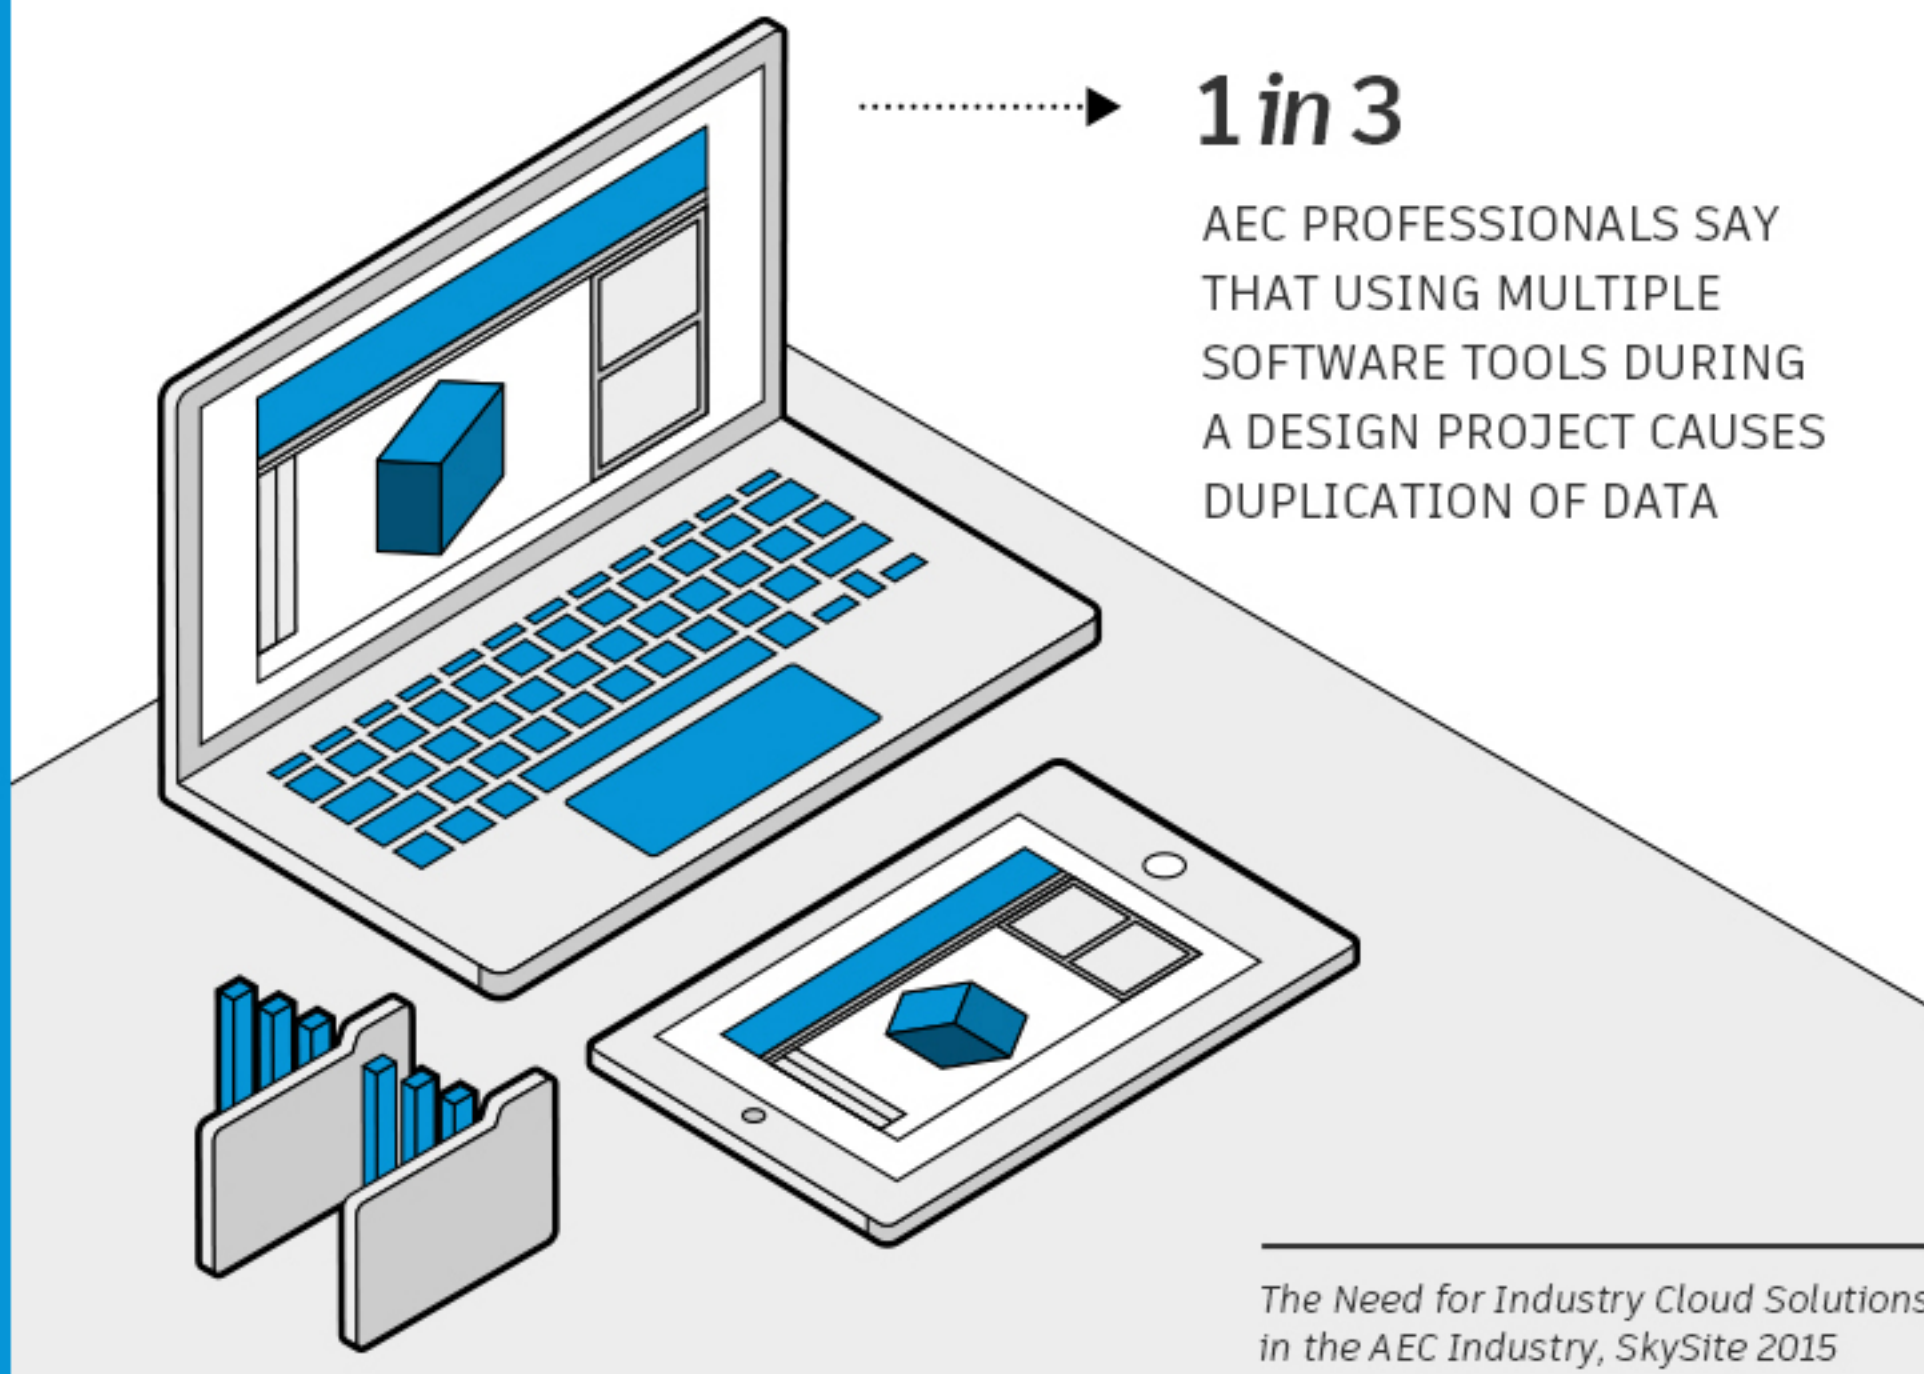

BENEFIT: Streamline decision making

In the building industry, time truly is money. Streamline BIM project timelines with the power of a cloud-enabled collaboration solution. Free your team to communicate routine updates more quickly, easily coordinate exchange of deliverables and milestones in the project timeline, and make decisions from wherever they are.

BENEFIT: Reduce complexity and spend

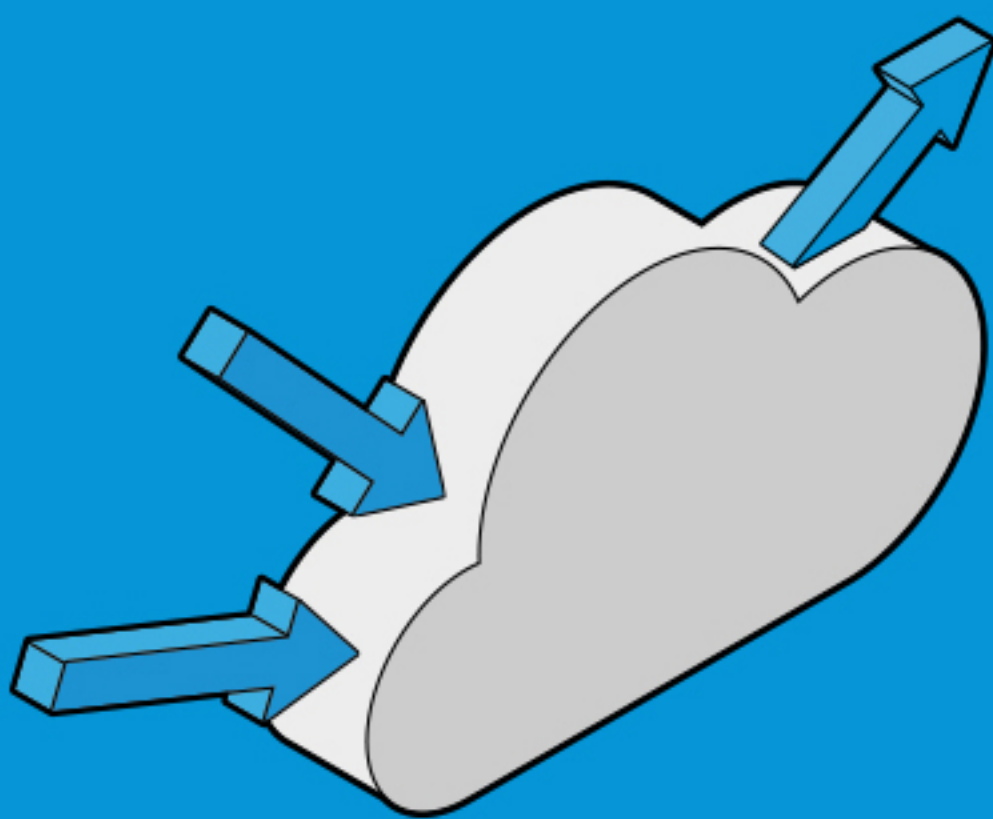

On-premise IT systems are expensive. There's the up-front investment, plus operating expenses and the cost of personnel to maintain it all. Fire-wall and network work-arounds are a time-suck. Liberate yourself from IT complexity and costs by using a shared workspace in the cloud. Get up and running quickly, with no hardware spend required.

CHALLENGE 3: Costly IT requirements

CLOUD COLLABORATION SOLUTIONS are quick to deploy, scalable, and allow easy access for design parties.

And that's just the start. Cloud-connected design collaboration can help you get more value from BIM...
