

ARE YOU READY FOR A RENEWABLE FUTURE?

Now is the time to make the transition to renewable energy sources

42%

of greenhouse gases still come from the energy sector¹

Almost every major energy company is set to invest at least **\$100 million** over the next **5-10 years** in low-carbon solutions²

87%

of AEC and manufacturing companies agree that becoming more sustainable helps with customer retention³

It makes ethical and economic sense to be more sustainable.

So, what's holding the energy sector back?

39%

of business leaders said that cost was the main barrier to adopting a more sustainable business model³

AND...

Often businesses think they're further on their sustainability journey than they actually are

BUT...

It's possible to get it right – with the right strategy

How Autodesk can help

Plan

Using geographical data to factor in local environmental considerations

Design

Minimising waste when developing parts by using generative design

Build

Digitising project management for more efficient collaboration

Operate

Monitoring for any environmental changes and impacts once the project is complete

Transitioning to renewable energy starts with a strong strategy, clear communication and aligned digital transformation initiatives
