

Load Autodesk Family

By enabling customers to browse and download Revit sample content from the cloud, software install time was reduced and a more intuitive search experience was created.

Cloud-optimized Autodesk family content for Revit

FEEDBACK FORUM

During the Inside the Factory testing event in November 2019, we studied customers' impressions of Load Autodesk Family and layered those with usage data analysis from the Technology Preview release.

WHAT WE HEARD

- Customers want the cloud experience to open as fast as a desktop feature.
- Users have different strategies to find content and prefer multiple filtering options.
- Customers need to be able to identify when filters are active so they can immediately see and understand the returned results.
- Users like the familiar web browser paradigm of back, forward, and home for navigating content.

WHAT WE BUILT

- Load Autodesk Family launched in Technology Preview in Revit 2021.1.
- We greatly sped up the time to open the dialog and show search results.
- We added back, forward, and home controls.

WHAT'S NEXT

We are continuing to invest in improving the cross-product content experience.
