

We created the People Flow Toolkit to automate, visualize, and analyze routes within buildings so designers can better understand flow and connection.

Evaluate building layouts for physical distancing

FEEDBACK FORUM

Customers have found it challenging to design for physical distancing requirements for COVID-19.

WHAT WE HEARD

- Customers need to find multiple paths of travel between points.
- Customers need to quickly and visually understand the distances within a room.

WHAT WE BUILT

- **Multiple paths** between points for path of travel to show options.
- **One-way indicator** to represent direction of travel which respect the Path of Travel calculation.
- **People content** which block path of travel and are used for occupancy.
- **Spatial grid** overlay for visual indicator of spatial distancing.

WHAT'S NEXT

We are developing more architectural improvements for customer satisfaction.
