1.4 What if the product I need is not in my industry collection?

You can always subscribe to additional individual products in order to address your more specialized needs (i.e., Simulation, Data Management, etc.).

1.5 What are some of the differences between the industry collections and the Design & Creation Suites?

Industry collections provide a superior experience to that of the Design & Creation Suites in the following ways:

Greater Value - Industry collections provide you value that well exceeds the Premium Suites at a very competitive price point.

Continuous Improvement - Industry collections are designed to continuously evolve to provide access to new applications and cloud services to meet your changing business needs with improved workflows. By supporting the demands of your business as it changes, you will receive access to new technology when it becomes available, rather than waiting for a new product release once a year.

Greater Flexibility and Choice - Subscriptions to Industry collections will be available with single-user and multi-user access and the choice of different term lengths, giving you greater flexibility to choose the option that fits your business needs. Today, subscriptions to the Design & Creation Suites are available for single-user access only.

More Cloud Services - You will receive access to more cloud services than are currently available in the Design and Creation Suites, giving you more opportunity to leverage the computing power of the cloud.

In addition, when you subscribe to a collection with multi-user access, you will be able to grant shared access to cloud services, whereas with Suites, customers are limited to a single named user per cloud service.

Simplified Packaging - We've made it easier for you to determine which offering is right for you. Instead of evaluating a multitude of Suites and then having to select standard, premium, or ultimate tiers – all of your most essential software tools are in one of three industry collections:

- Architecture, Engineering & Construction Collection
- Product Design Collection
- Media & Entertainment Collection
