Graphics are not generally used as the primary method to communicate concepts. However, there may be instances in which a graphic does not have a text alternative. Software: Ribbon buttons have text labels. Controls and Revit elements have tool tips. Authoring Tool:
1.2.1 Audio-only and Video-only (Prerecorded) (Level A) Also applies to: Revised Section 508 • 501 (Web)(Software) • 504.2 (Authoring Tool) • 602.3 (Support Docs)	Web: Electronic Docs: Supports Software: Supports Authoring Tool:	Web: Electronic Docs: There are no known cases of audio-only and few cases of video-only. The video-only case had a text equivalent describing the action in the video. Software: There are video-only cases in Revit, not Audio-only. In those cases, they are used as part of the expanded tool tip system for Ribbon elements. Each case also has a text description, and they are always together to make it clear that they go together. There are some cases in which positional visual cues are used, but text labels are provided for the user, e.g. prefix, suffix, above, below. Tables are often used for user input. Colors, text size, and position are rarely used in the User Interface. Sound is not used except for error prompts. Authoring Tool:

Notes: Revit has a robust API which facilitates third-party applications to create and modify Revit data. However, not all elements or features are fully exposed to the API or do not have key access points. This assessment does not cover external applications or cloud-based services that can be launched from within Revit. This includes, but is not limited to, Dynamo*, Dynamo Player, Generative Design*, applications accessed from within the Add-Ins Tab, and any application not installed with Revit by default nor accessible without logging in to cloud-based services.

*Please see separate VPATs published for Dynamo and Generative Design.
