Autodesk Foundation Impact Report FY22

A better world designed and made for all

Image courtesy of Collin Hughes
A message from Foundation Leadership

At a time when humanity is reeling—from the pandemic and its aftershocks to the scorching effects of climate change—we find reason to hope in the vision, tenacity, and innovation of the nonprofits and startups supported by the Autodesk Foundation. Capital provided from Autodesk to the Autodesk Foundation provides early-stage, risk-tolerant and flexible funding along with capacity-building in-kind support to innovations with the potential to transform industries.

Last year the Autodesk Foundation continued investing financial capital, technology, and talent resources across our portfolio of nonprofits and startups. We also saw promising results across our three areas of focus: energy and materials, health and resilience, and work and prosperity. The nonprofits and startups we fund have forged solutions to our most pressing social and environmental challenges—leading the charge in reducing greenhouse gas emissions, improving resilience in communities most vulnerable to climate change, and preparing workers to thrive in an era of automation. Our capital is sparking industries to transition to more sustainable, resilient, and equitable ways of doing business. In this, our first Autodesk Foundation impact report, we share their stories and the measurable results of their work.

Consider construction startup BamCore, which is transforming the market for low-carbon building systems by creating the world’s first global supply chain of prefabricated timber bamboo wall systems. By leaning into the Autodesk Foundation’s comprehensive support, BamCore has tripled its fabrication rate, reduced installation time by 50%, and raised $15 million in just two years’ time.

For Bridges to Prosperity, a rural communities-focused nonprofit, we provided a working capital loan to equip them with the upfront resources they needed to keep scaling bridge construction in Uganda during the pandemic. This infusion of flexible funding allowed Bridges to Prosperity to overcome disrupted cash flow and build a track record of repayment to position them to tap into larger levels of investment as they grow.

Finally, the Autodesk Foundation’s support of these and other organizations is leading to measurable impact. In fiscal year 2022, the Autodesk Foundation’s global portfolio mitigated 1.4 million metric tons of CO2e emissions. The portfolio reached more than 29 million people with resilient solutions in housing and infrastructure, energy access, agricultural productivity, and workforce development. Portfolio organizations placed nearly 14,900+ people in new or improved jobs, including ~90% (13,400) workers with a $5,000 annual increase in income.

These are substantial successes, and we’re excited to invite you to learn more about how we define and measure impact through the work of our portfolio organizations rising to meet the social and environmental challenges we face across the world. Truly tackling these challenges will require a journey of successes and failures from innovators who are relentless in their pursuit of impact. We are honored to play a role as the Foundation leadership team in supporting that journey.

Sincerely,

Christine Stoner
Executive Director, Autodesk Foundation

Jean Shia
Managing Director, Impact Investment and Management, Autodesk Foundation
Philanthropy

Autodesk engages in philanthropy through multiple avenues, driving progress toward a more sustainable, more equitable world.

The Autodesk Foundation supports innovative solutions to the world’s most pressing social and environmental challenges. Through our deployment of catalytic capital, we help de-risk innovations that are transforming industries to be more sustainable, equitable, and resilient. The Autodesk Foundation combines financial capital with in-kind resources to catalyze and scale the next generation of innovations, ranging from direct carbon capture to rapid shelter solutions.

Autodesk’s current goal is to donate 1% of its operating margin to the Autodesk Foundation.

The Autodesk Foundation portfolio impact

In fiscal year 2022, the Autodesk Foundation’s global portfolio achieved the following:

1.4 million+ metric tons CO2e of GHG emissions reduced

29 million+ individuals reached with resilient solutions in housing and infrastructure, energy access, agricultural productivity, and workforce development (cumulative since fiscal year 2020)

14,900+ people placed in new or improved jobs, including 13,400 (90%) with an annual income increase of $5,000 or more

These impact metrics rely on data aggregated and sourced from financial reports, annual reports, organizational key performance indicators, and self-reported data from the Autodesk Foundation portfolio.

Advance industries

Catalyze innovation

The Autodesk Foundation invests in nonprofits and startups scaling early-stage technologies that have the potential to dramatically reduce GHG emissions and waste within our industries.

We target early-stage (seed to Series A) technology-driven ventures, and de-risk technology and business models with a combination of financial capital and in-kind support. We prioritize sectors where our design and make expertise is particularly beneficial, such as renewable energy, electrification of transportation, low-carbon refrigeration/heating, building and industrial energy efficiency, carbon removal, and materials innovation.

From removing CO₂ out of ambient air to refining critical, low-carbon minerals, the Autodesk Foundation portfolio is helping accelerate the transition to a decarbonized economy.

Who we fund

13 startups and ecosystem partners scaling innovative technologies that reduce GHG emissions

39% of Autodesk Foundation portfolio funding in fiscal year 2022

Geographic reach

We primarily invest in the United States, where emissions per capita exceed those of most other nations, but we recognize the importance of also enabling sustainable growth of technologies that combat climate change in both emerging and developing markets. In fiscal year 2022, we expanded our Energy & Materials portfolio globally to catalyze climate innovation in developing markets.

Impact measurement and management

We evaluate the impact of the Autodesk Foundation Energy & Materials portfolio based on GHG emissions abated. We engage third-party experts such as CEA Consulting and The Impact to calculate and audit CO₂e reductions realized by our portfolio and CO₂e reduction potential. We also support field building efforts to bolster the ecosystem of forward-looking climate impact assessments through initiatives such as Project Frame.

Vartega

Recycling carbon fiber reduces carbon emissions

Vartega, a recycling technology company that has developed a low-cost grade of carbon fiber through its patented recycling process, was added to the Autodesk Foundation portfolio in fiscal year 2022. The company's recycled carbon fiber solutions—which have been found to exhibit the same mechanical properties as virgin carbon fiber—can be incorporated into intermediate materials (products that require additional processing), including non-woven fabrics, thermoplastic pellets, and 3D printing filaments.

Recycling carbon fiber is 95% less energy-intensive and 50% less expensive than making virgin carbon fiber. Vartega aims to enable growth of the circular economy by closing production loops across all material composites. Greenhouse gas reduction remains central to the company's metrics. For every metric ton of carbon fiber recycled, Vartega saves 13.4 metric tons of CO₂ compared to manufacturing virgin carbon fiber.

Vartega's patented recycling hardware was designed and engineered with AutoCAD, Inventor, and Fusion 360 technology and provides strong, flexible, low-cost composite materials to key industries, including aerospace and automobile.

Learn more
Advance industries

**Catalyze innovation**

The Autodesk Foundation invests in nonprofits and startups scaling technology-based solutions that improve resilience in low resource communities most vulnerable to climate change.

We focus our investments on the built environment, agriculture, energy access, and water and sanitation, where technology and design and make can have the greatest positive impact.

From retrofitting homes in Colombia to better withstand earthquakes to mass manufacturing design-forward handwashing and drinking stations for children in Ethiopia, the Autodesk Foundation portfolio fosters health and enhances community resilience through technological innovation.

**Who we fund**

25 nonprofits and startups fostering health and community resilience through technological innovation

39% of Autodesk Foundation portfolio funding in fiscal year 2022

**Geographic reach**

We focus on regions most vulnerable to climate change, including Sub-Saharan Africa, the Indian subcontinent, Southeast Asia, and South America.

---

**We invest in organizations increasing the health and resiliency of communities impacted by climate change.**

**Impact measurement and management**

We evaluate the impact of the Autodesk Foundation Health & Resilience portfolio based on outcomes related to environmental protection, community health and well-being, and economic advancement as a measure of increased resilience.

Build Change

Earthquake-prone city in the clouds needs the cloud to protect homes and families

Densely populated Bogotá, Colombia, is located along the Pacific Ring of Fire, the most seismically active region in the world. It is also home to many informal urban neighborhoods, where houses are often built by those who lack the proper skills or training to ensure structural safety.

Build Change is working to protect these vulnerable houses. The nonprofit organization—which works in emerging nations to reduce deaths, injuries, and economic losses caused by earthquake-related structural collapses—is using innovative technology to identify retrofitting opportunities in this city of 7 million. In collaboration with the Autodesk Foundation, Build Change has developed a cloud-based field-capture tool that can evaluate homes and zero in on structural weaknesses. With this tool, the organization can scale its work rapidly, with the goal of more than 11,000 interventions in 2022.

Kheyti

is revolutionizing business for small farmers in India with Fusion 360.

Nexleaf Analytics, WeRobotics, and Simprints

are using technology and design thinking to bridge vaccine access in emerging markets.

Build Change

is scaling safe housing with Autodesk technology.

Sanergy

Sanergy’s Matthieu Desvignes is recognized as a leader in the AEC industry with Digital Builder’s 40 Under 40.

The Mortenson Center in Global Engineering

is enhancing access to fresh drinking water in remote communities using Fusion 360.
Advance industries

Catalyze innovation

The Autodesk Foundation invests in nonprofits, startups, and ecosystem partners who prepare workers to thrive in the era of automation. We invest in initiatives and solutions that help workers prosper now—and in the future.

Investments focus on upskilling and reskilling learners, facilitating employment for workers, and changing employer behavior within the construction and manufacturing industries. While we recognize the crucial role that a range of organizations play, including government, employers, and educational institutions, we invest primarily in early-stage technology-enabled startups, nonprofits, accelerators, and funds that help create a more inclusive economy.

We invest in organizations taking a worker-centered approach to upskilling and career advancement in service of an equitable and prosperous future for all.

Impact measurement and management

We evaluate the impact of the Autodesk Foundation Work & Prosperity portfolio based on outcomes related to skills acquisition and inclusive access to quality jobs. Collecting and aggregating aligned metrics drives accountability across the portfolio and provides us with useful insights to drive toward industry change.

Geographic reach

We invest in organizations in the United States and the UK, and our research also includes Asia Pacific and Europe.
Pallet

Private shelter that can be built in a day

As part of the Autodesk Foundation Work & Prosperity portfolio, we have made an investment in Pallet, a social purpose company that manufactures rapid-response shelter villages to provide private transitional housing in a community setting, while building a more equitable and inclusive manufacturing workforce. To date, Pallet has served thousands of unhoused people through over 60 shelter villages across 11 states. Pallet’s panelized cabins can each be built in 30 minutes and require minimal training to install, offering cities, counties, states, and nonprofits cost-effective and high-quality housing units that provide safety, dignity, and community for unhoused people. Each village resident also has access to wrap-around support services, such as meals and case management, provided by local service providers. Pallet cabins are insulated, resistant to mold, rot, and pests, easy to clean, and can last more than 10 years.
Forward-looking statements

This report includes estimates, projections, and other forward-looking statements within the meaning of Section 21E of the Securities Act of 1934 and Section 27A of the Securities Exchange Act of 1934. These forward-looking statements generally are identified by the words “may,” “believe,” “could,” “expect,” “anticipate,” “estimate,” “intend,” “strategy,” “plan,” “should,” “will,” “would,” and similar expressions. Forward-looking statements are based on current expectations and assumptions that are subject to risks and uncertainties that may cause actual results to differ materially. We continually review GHG emissions quantification methodologies and are committed to implementing best practice quantification methodologies. We describe risks and uncertainties that could cause actual results and events to differ materially in our reports filed with Securities and Exchange Commission. We undertake no obligation to update or revise publicly any forward-looking statements, whether because of new information, future events, or otherwise.
