Fabric of Filmmaking®

Enable your creative team to work together as one with Autodesk Flow Capture

AUTODESK

Filmmaking, reimagined

Autodesk Flow Capture (formerly Moxion and PIX) is more than a tool - it's the connective tissue of modern filmmaking.

Trusted on projects from Hollywood blockbusters to indie breakouts, TV shows and commercials, Flow Capture is engineered by filmmakers from the ground up to be feature-rich, yet intuitively easy to use.

The result is a robust platform that weaves together every phase of production, enabling creative teams to collaborate in real time across locations, departments, and disciplines. Whether reviewing dailies, syncing editorial feedback, or managing assets with precision, Flow Capture keeps every contributor - from director to editor to producer - aligned around a single source of truth, empowering teams to move faster, stay focused, and tell better stories.

Simple, yet powerful

Flow Capture delivers the ultimate review experience.

- An innovative and unique blend of security, power, and simplicity

- Elegant and intuitive interface design

- Flow Capture Rooms allows you to edit, cut, and review with your team in real time, no matter where they are located

Flow Capture has been tried and tested on some of the most complex productions, in some of the most challenging environments on earth.

"Amazon Studios uses Flow Capture for creative reviews for shows of all sizes. It helps streamline the handoff from production to postproduction, making the workflow more efficient."

Eric Iverson, Head of Product Strategy, Amazon Studios

"[Real-time review in Flow Capture] was pretty incredible and like being in an edit bay with the team. Though everyone was working remotely, we were able to have one-on-one dialogue while scrubbing through the Avid timeline during review".

Malia Marshall, Co-Executive Producer, *LA Fire & Rescue*

Seamless continuity, amplified creativity

Watch what happens when the barriers of time and location are removed with Flow Capture Rooms.

With Flow Capture Rooms, you can seamlessly share live streams and review uploaded assets in a single cloud-based environment.

- Simultaneous, real-time review and discussion eliminate confusion, spark creativity, and accelerate decision-making cycles

- Consolidating feedback into a single, streamlined platform eliminates fragmented input and manual data entry, breaks down tool silos, and reduces revision loops

- HDR10 & Dolby Vision and frame-accurate annotations support true content fidelity, confident color-critical decisions, and preserved creative intent
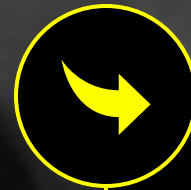

The bottom line

Cross-team chaos is a productivity blocker. Flow Capture helps you shorten the review and approval cycle, increase decision velocity, and maintain creative momentum.
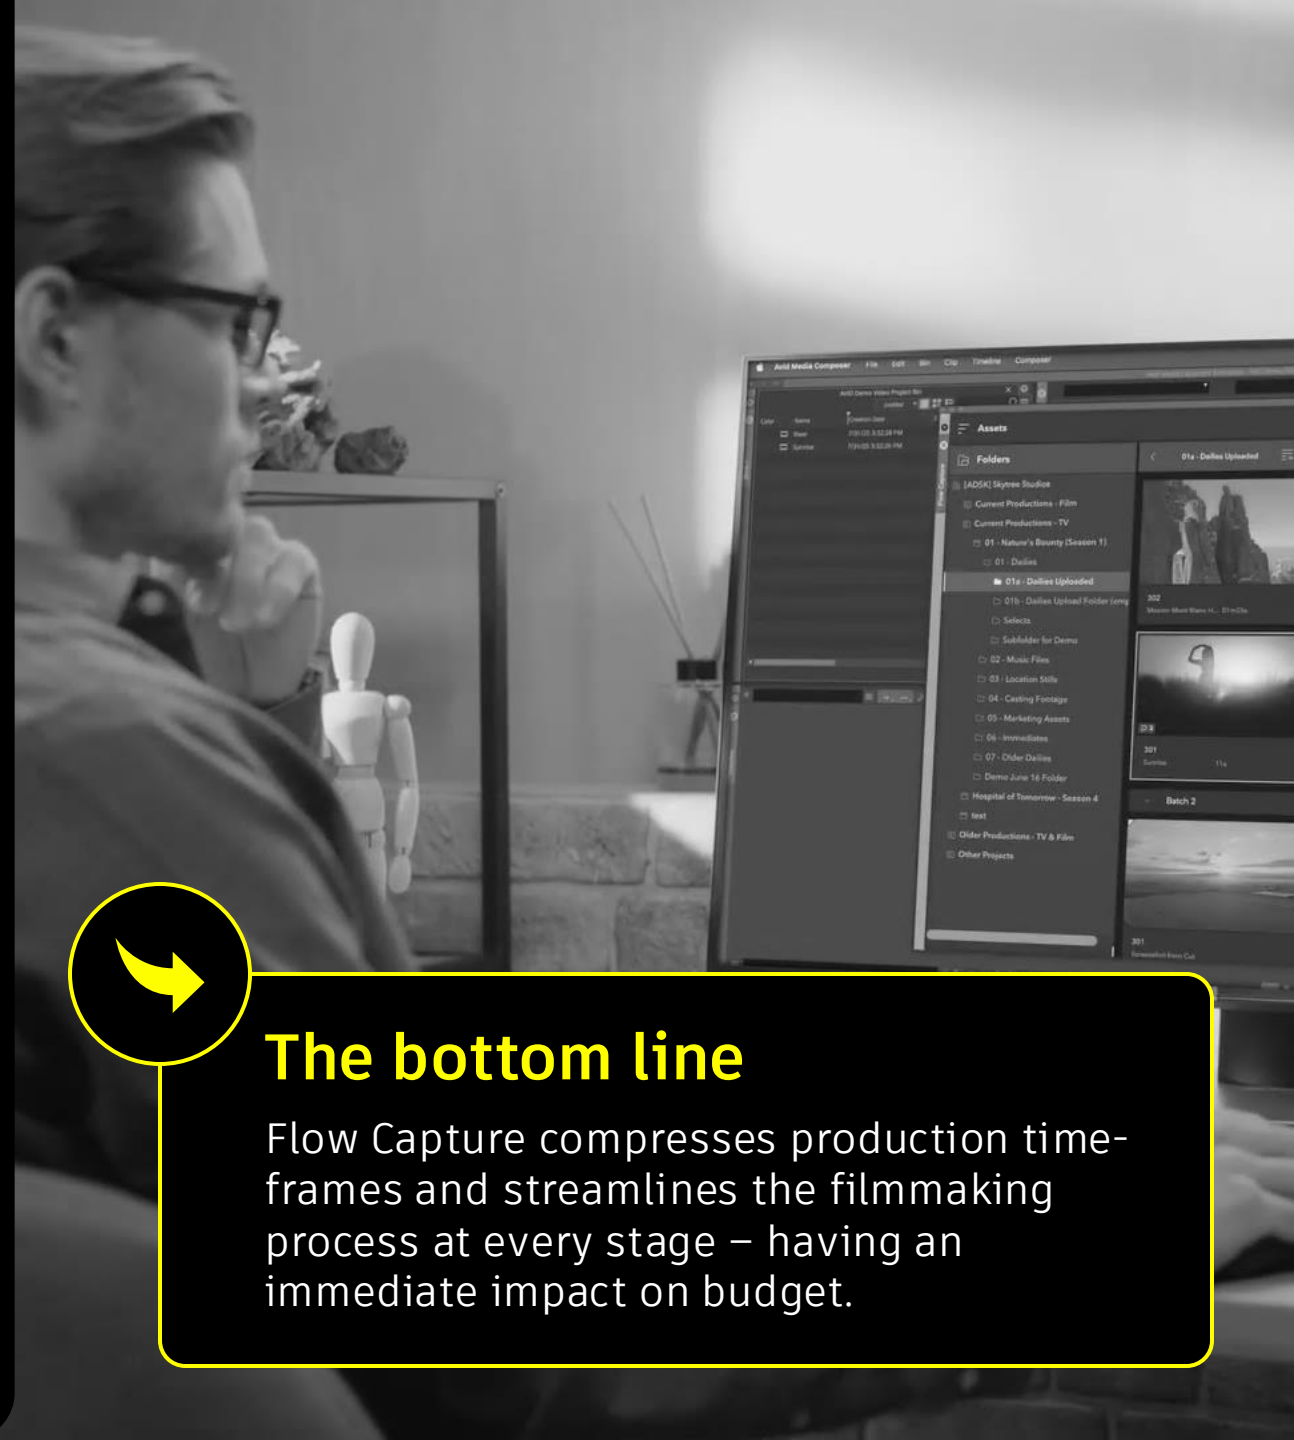

Accelerated dailies

Dailies are the bedrock of workflow infrastructure. Flow Capture dailies seamlessly provide editors, directors and crew with access to footage captured during the day's filming, at the end of each day.

- Editors can begin the editing process as soon as the shot is captured, pick up any missing shots before the set has been struck, then send their edits back to set for directors to view

- Directors can pick up any missing shots or re-shoot scenes while the talent and set is in place

- VFX can work with sets and vendors to get exactly what they need, faster and more accurately

- DOP can quickly and easily match lighting angles, style and content, without having to be on set

- The Art Department can build for tomorrow based on what is being used today

- Designers can adjust shots and make changes across all units, without having to be there physically

The bottom line

Flow Capture compresses production time-frames and streamlines the filmmaking process at every stage – having an immediate impact on budget.

# Unparalleled security, controlled collaboration

Flow Capture's streamlined, simple-to-use interface enables users to collaborate and communicate freely, with a back-end foundation that puts the total security of your footage and data at the heart of everything. Our enterprise-grade security protocols, vetted and approved by some of the world's largest and most security-sensitive studios, keep your content safe during the filmmaking process. Security features include Multi Factor Authentication (MFA), Digital Rights Management (DRM), dynamic, burnt-in and forensic watermarking and activity logging - plus the ability to quickly and easily create user and team permissions.

"I could let somebody look at something in a window that was an hour long or a day long and not have to sweat it out or bring everybody down to a screen somewhere in Hollywood, which nobody likes to do."

Kevin O'Neill, Sr. VFX Supervisor & Post-Production Supervisor, *Trust*

Make better films, **faster**

The world's most innovative filmmakers are using Flow Capture to enhance the creative process and tell great stories.
