

# AI Transparency Card

## Fusion

AutoConstrain

### What this AI does

A feature that analyzes sketches and suggests the constraints and dimensions to fully constrain sketches.

### Data handling

#### Training data

|               |                                  |
|---------------|----------------------------------|
| Data types    | Geometry<br>(common elements)    |
| Data sources  | Customer content, Synthetic data |
| Personal data | Not used                         |

#### Customer choice

|                        |           |
|------------------------|-----------|
| Feature classification | Standard  |
| Choice format          | Always on |

### Trust & safeguards

|                     |                                                               |
|---------------------|---------------------------------------------------------------|
| Human oversight     | Yes                                                           |
| Built-in safeguards | Tokenization, De-identification                               |
| Known limitations   | Results may vary based on inputs, Not for safety-critical use |

#### Additional transparency

|                   |             |
|-------------------|-------------|
| Model provider    | Autodesk    |
| Primary technique | Transformer |
