Fusion

Generative Design Clustering

Description

The Visual Similarity filter (aka Clustering) is a Generative Design feature in Fusion. It uses an internally trained machine-learning algorithm to identify similar-looking generative design outcomes, grouping them, to make it easier for users to find similar but different design alternatives.

Feature information

Feature functionality	Augment
Model source	Proprietary
Primary technique	Generative Design Algorithms

Trust ingredients

User directed feature	No
Personal data	No
Data source(s)	Synthetic data
Choice format	N/A
Encryption at-rest	Yes
Encryption in-transit	Yes
Other safeguards	Restricted access Anonymization
