## Fusion

### Generative Design Optimization

---

## Description

Generative Design in Fusion is a performance and manufacturing-aware, design exploration technology. It synthesizes user inputs for a geometric design space, performance and manufacturing requirements, and material availability to generate potential design outcomes.

---

## Feature information

---

Feature functionality	<b>Automate</b>
Model source	<b>Proprietary</b>
Primary technique	<b>Generative Design</b>

---

## Trust ingredients

---

User directed feature	<b>Yes</b>
Personal data	<b>Yes</b>
Data source(s)	<b>N/A</b>
Choice format	<b>Turn Off</b>
Encryption at-rest	<b>Yes</b>
Encryption in-transit	<b>Yes</b>
Other safeguards	<b>Restricted Access , Anonymization</b>
