

Getting up and running with Moldflow 2024

Custom Install and Deployments

New in the Moldflow 2024 release we have a few new options for individual installations and deployment installations. These options by-pass the need to run the Moldflow License Configuration tool (MLC.exe) before first launch.

You can still use the normal 'download' method but this is still dependent on running MLC.exe.

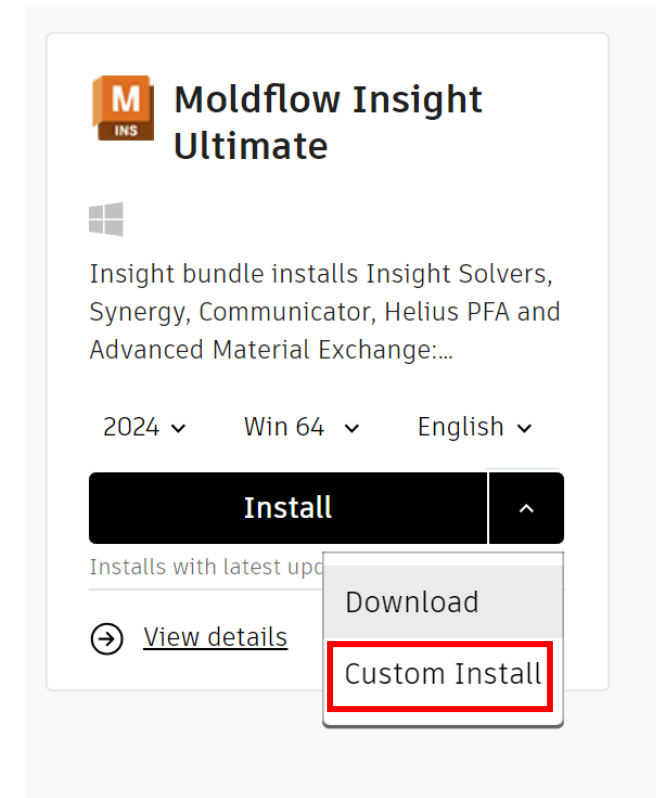

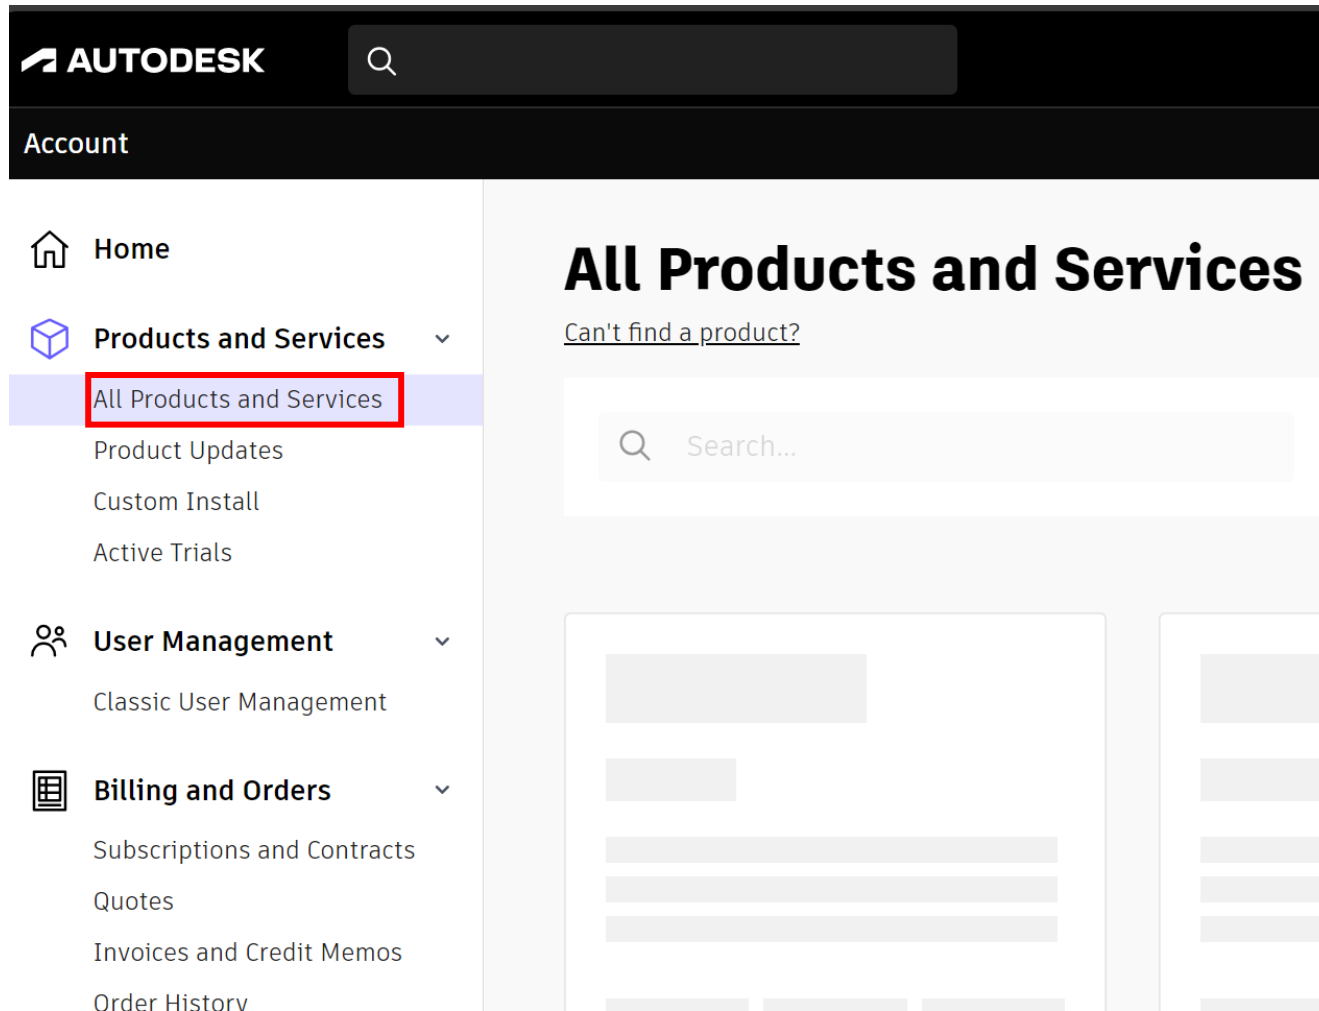

The current recommendation is to use the new 'custom install' option.

A close-up photograph of a car's exterior, focusing on the chrome trim and body panel. The chrome trim is highly reflective and polished, showing sharp highlights and reflections. The body panel is a light color, possibly silver or white, and has a smooth, curved surface. The text "Custom Install" is overlaid in the center of the image.

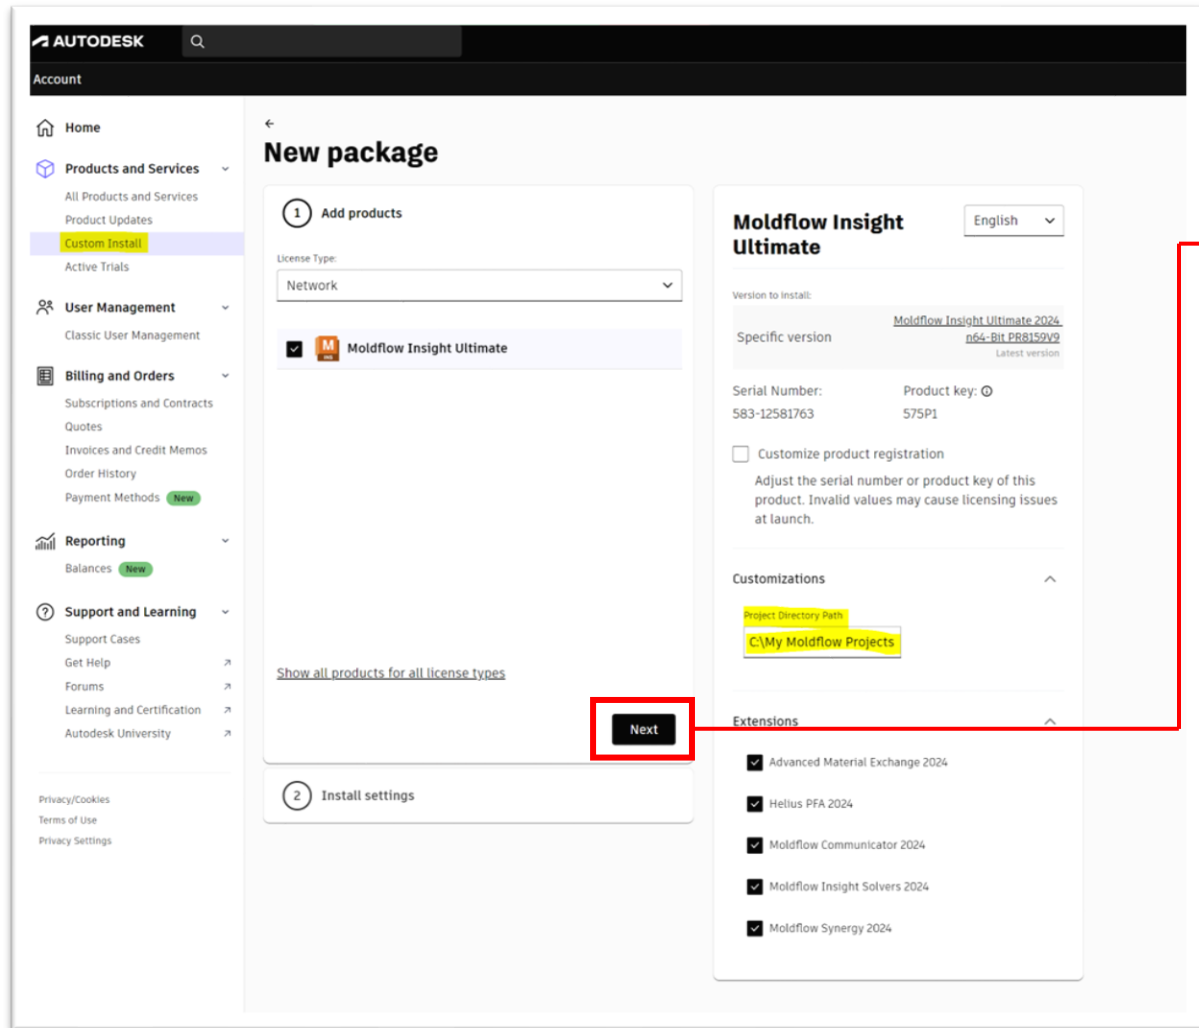

Custom Install

Moldflow Insight | Custom Install

This release Moldflow is providing custom install. Next few slides will walk you through the workflow. We recommend to use this option. NOTE: 'Download' is also available but requires configuring the license with MLC.exe

Specify a license server

Select your license server model: Single license server

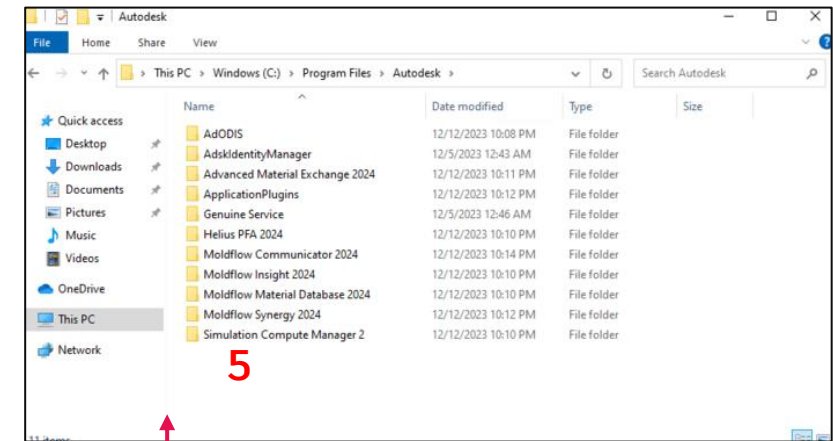

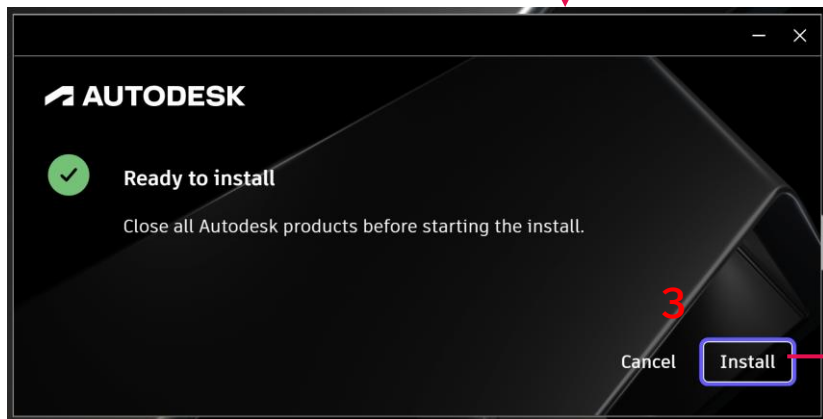

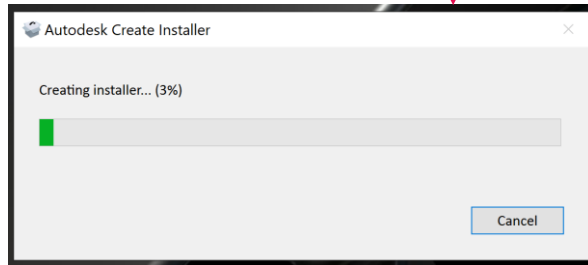

Enter the name of the server that will run the Network License Manager: server_name_here

Cancel Save

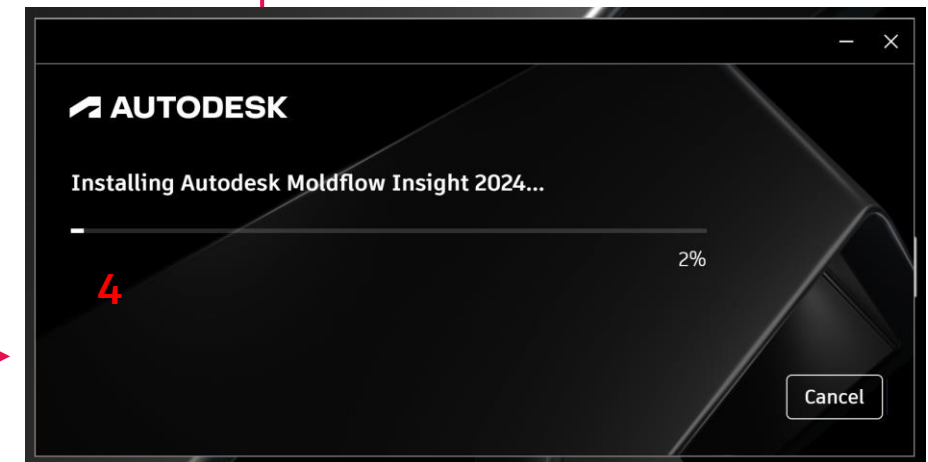

Moldflow Insight | Custom Install (Cont.)

Double click on the downloaded executable to start installer creation.

Product will be installed at specified installation path during custom installation creation.

Deployment Install

Moldflow Insight | Deployment Installation

Deployments can be created by administrators, so that the products can be easily installed across many machines. (NOTE; deployments are only available for Windows).

The following slides show the step-by-step process.
